OPERATION OF FREIGHT FORWARDERS AND ADOPTION OF RAIL
INTER-TERMINAL TRANSFER SYSTEM FOR CONTAINERISED
CARGO MOVEMENT OF TANJUNG PELEPAS PORT, MALAYSIA

HALIL BIN ALI

A Thesis Submitted to Asia e University in
Fulfilment of the Requirements for the
Doctor of Business Administration

April 2024

ABSTRACT

This dissertation explores the application of the Technology Acceptance Model (TAM) in the context of rail interterminal transportation. Utilizing the TAM framework, the study tests various hypotheses and research questions through extensive statistical analysis. Data was collected via surveys conducted among freight forwarding companies and analysed using SPSS software. The results demonstrate that the original TAM model, along with its subsequent iterations, effectively predicts and explains user acceptance of technology within rail interterminal transfer operations. The analysis identified perceived usefulness and perceived ease of use as the primary dimensions influencing technology adoption. Additionally, secondary dimensions such as privacy, perceived security, perceived trustworthiness, and perceived capability also significantly impact user acceptance. Correlation analysis showed that all null hypotheses were accepted except 1, indicating relationships among the variables as posited by the model. However, regression analysis revealed the presence of additional factors that may influence the outcomes, suggesting the complexity of technology adoption in this context. Based on these findings, several recommendations are proposed. These recommendations address the results derived from the demographic analysis, correlation analysis, and regression analysis, offering actionable insights for improving technology acceptance in rail interterminal transfer operations.

Keywords: Container interterminal transfer, technology acceptance model, integrated freight transportation, container terminal operation, role of freight forwarders in containerization

APPROVAL

This is to certify that this thesis conforms to acceptable standards of scholarly presentation and is fully adequate, in quality and scope, for the fulfilment of the requirements for the Doctor of Business Administration.

The student has been supervised by: **Professor Dr Juhary Ali**

The thesis has been examined and endorsed by:

Dr Dazmin Bin Daud

Assistant Professor

UCSI University

Examiner 1

Professor Dr Asif Mahbub Bin Kassim

Professor

Binary University

Examiner 2

This thesis was submitted to Asia e University and is accepted as fulfilment of the requirements for the Doctor of Business Administration.

Dr Khairul Nizam Mahmud

Asia e University

Chairman, Examination Committee

ACKNOWLEDGEMENTS

The journey that I and my fellow aspirants going through this project had never been easy. Having to go through daily workloads and working on this project has its cost. But the journey has given me strength and confidence, knowledge, and wisdom to deal with my professional activities.

This project is not about one-man show. Professor Juhary Ali has been a bulwark at times when giving up was an option. His advice and a hand on my shoulder kept me on the path, no matter how hard it was. My gratitude should also be given to all my lecturers, particularly Professor Bahaudin for being around when I needed him.

I must thank my advisor, Dr. Muhammad Zaly Shah from UTM and Prof Juhary Ali for their detailed guidance and the picture of clear path forward. Their professionalism is very high, bar none.

In real life, true friends are sometimes a walking stick and a ray of light for walking the ever-winding route. Especially in this case, they too are DBA aspirants. We nudged; we helped each other until we see the finishing line.

To my wife, Fairuz Ramli, my daughter and my son, their tolerance, support and soothing words gave me the energy to push forward. They are my very reasons to take this path to the very end.

Last but not least, this journey is taken with all the unshaken believe that Allah SWT is there to shower me with His blessing, love and compassionate without which, survival in this venture would have surely faltered.

All these had told me not once, if I need to go through these one more time, I believe
I can.

CHAPTER 1

INTRODUCTION

1.0 Background of the Study

As a maritime nation, Malaysia is surrounded by the sea on both sides. With industrialization in both Peninsular Malaysia and East Malaysia, the sea facilitates global trade of the country. Malaysia has a long history of providing port services, dating back to the Malacca Empire. However, its full maritime potential has yet to be fully exploited.

The Strait of Malacca is a major sea lane for shipping, connecting the western and eastern hemispheres. It links major economies such as China and Japan, fast-developing economies like Vietnam, Indonesia, and the Philippines in the east, and India, the Middle East, and Europe in the west. Hundreds of thousands of ships traverse these waters annually, with a fraction calling at Malaysian ports to load or discharge cargo contributing hugely to the country's GDP through external trade.

The country's significant contribution to international trade is further underscored by its proximity to vital shipping lanes, particularly the Straits of Malacca and the South China Sea. These waterways are among the busiest and most important maritime routes in the world, serving as conduits for a substantial portion of global trade. The Straits of Malacca, for instance, is a key chokepoint that sees the transit of about 25% of the world's traded goods, making Malaysia's role in ensuring the security and smooth operation of this passage critical (Zubir, 2007).

Malaysia is deeply intertwined with its maritime activities, which are crucial to its security, economy, and national sovereignty (Suhaimi, et.al, 2023). The country relies heavily on sectors such as fishing, the oil and gas industry, ports and shipping,

and tourism. With an extensive coastline stretching over 4,600 kilometres, Malaysia is acutely aware of the importance of maritime security. This strategic geographical positioning necessitates robust measures to safeguard its waters, prompting Malaysia to play a pivotal role in the International Maritime Organization (IMO).

Malaysia's ports play a significant role in the nation's trade performance (Mohamad Rosni, 2011). The country has categorized its ports into major and minor ports, based on their capacity and strategic importance. Most of these ports operate as multiterminal ports, meaning they can handle various types of cargo including bulk, break bulk, and containerized goods. Notably, at least one of Malaysia's ports is designated as a container transshipment port, specializing in the transfer of containerized cargo between ships, facilitating global trade routes and improving logistics efficiency (Zailani and Jeevan, 2019). This strategic organization and specialization of ports enhance Malaysia's ability to manage and boost its trade activities effectively.

Furthermore, Malaysia's ports are some of the most active in the region, with Port Klang and the Port of Tanjung Pelepas ranking among the world's top container ports. These hubs facilitate a high volume of cargo movement, reinforcing Malaysia's status as a central player in international logistics and trade.

As a major trading nation, Malaysia is increasingly becoming a central hub in the global supply chain (<https://www.mida.gov.my>). This transformation is driven by its relatively good and well-developed infrastructure and strategic initiatives. The country provides commodity handling capacities, enabling efficient management of diverse goods ranging from raw materials to finished products (Ismail et al., 2019). Its container terminals, such as those at Port Klang and the Port of Tanjung Pelepas,

facilitate the seamless movement of a huge volume of cargo, ensuring timely and cost-effective shipping operations particularly for transshipment containers.

Malaysia's free trade zones (<https://www.mida.gov.my>) provide significant incentives for businesses, including tax benefits and streamlined customs procedures, attracting multinational companies to establish operations within the country. These zones, coupled with sophisticated distribution centres, enhance the efficiency of logistics and warehousing, ensuring that goods can be quickly processed and dispatched to their final destinations.

The role of Malaysia's free trade zones can be further enhanced by leveraging the interconnectedness of its ports, facilitated by a robust freight transportation infrastructure. These free trade zones serve as pivotal hubs for international trade, offering favourable conditions for businesses to operate, including streamlined customs procedures, tax incentives, and access to state-of-the-art logistics facilities.

By strategically linking these free trade zones with an efficient and well-connected network of ports, Malaysia can unlock even greater economic potential. Imagine a seamless flow of goods and commodities moving effortlessly from the manufacturing centres within the free trade zones to the ports for export to global markets. This interconnectedness not only enhances the efficiency of trade operations but also strengthens Malaysia's position as a competitive player in the global supply chain.

Investments in transportation infrastructure, such as highways, railways, and intermodal terminals, are crucial for facilitating this seamless movement of goods. A well-developed infrastructure network ensures that products can be transported quickly and cost-effectively from production centres to ports, reducing transit times and logistics costs for businesses (Zen et al., 2019).

Furthermore, the integration of advanced technologies, such as real-time tracking systems and automated cargo handling equipment, enhances the efficiency and reliability of freight transportation within Malaysia's interconnected port network. This not only attracts more businesses to utilize the free trade zones but also improves the overall competitiveness of Malaysian exports in the global market.

Moreover, the interconnectedness of Malaysia's ports opens up new opportunities for collaboration and synergies between different industries and sectors. For example, manufacturers located within the free trade zones can benefit from just-in-time inventory management practices enabled by efficient port operations. Similarly, exporters can capitalize on the availability of diverse shipping routes and services to reach a wider range of international markets.

In essence, the interconnectedness of Malaysia's ports facilitated by a well-developed freight transportation infrastructure amplifies the effectiveness of its free trade zones, driving economic growth, fostering innovation, and strengthening Malaysia's position as a dynamic trading nation in the global arena.

Moreover, Malaysia's status as a financial hub particularly in Islamic finance plays a crucial role in supporting global trade. Its developed Islamic banking and financial services sector provide essential support for international transactions, trade financing, and investment, bolstering the overall efficiency and reliability of the global supply chain.

The effectiveness and efficiency of Malaysia's financial system in allocating financial resources will be vital for the country's transformation into a high value-added, high-income economy. As regional economic and financial integration deepens, the financial sector will play an increasingly significant role in intermediating
